PERFoRM

Bringing CPS into industrial application

Matthias Foehr, Siemens AG

Needs

PERFoRM
Production harmonizEd Reconfiguration of Flexible Robots and Machinery

Companies need

- production cost reduction
- Higher flexibility to react to breakdowns & delays
- Higher flexibility to reconfigure production systems

Clients demand

- more customization
- cheaper prices
- higher quality

Need for a new generation of flexible manufacturing systems

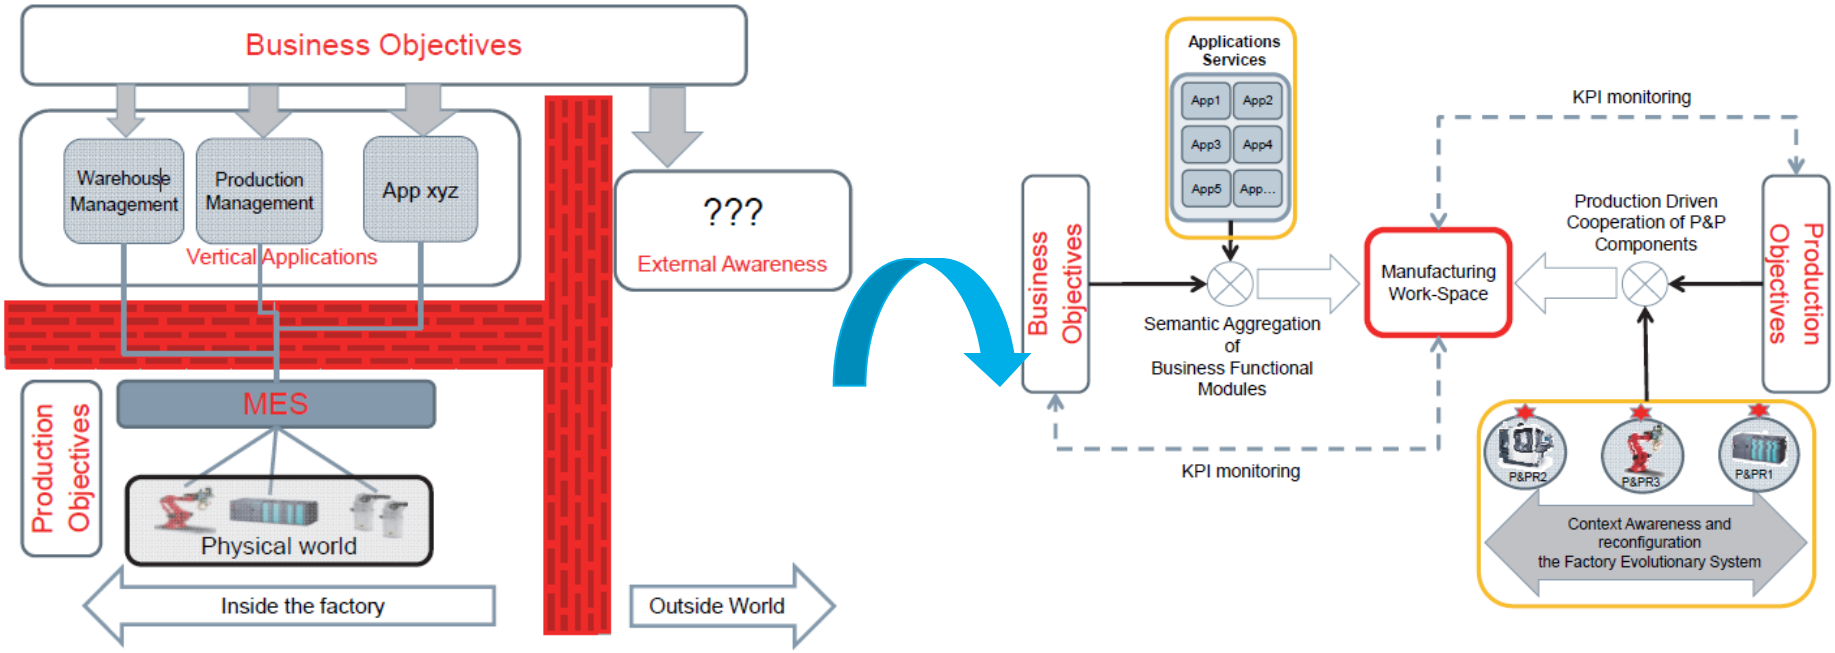
Cyber Physical Systems	**Service-Oriented Architecture**	**Agent-based Manufacturing**
Cloud-based CPS	**Plug&Produce**	**Simulation of Flexible Production Systems**

Challenges

Which challenges need to be targeted to address these needs effectively?

- Lack of widely accepted standard plug-and-produce devices
- Resistance to change
- Large number of diverse interest groups
- Techno-Economic Risk of New Paradigm Adoption
- Maintain high levels of quality over small lot sizes
- Increasing speed of change
- Legacy production equipment and systems

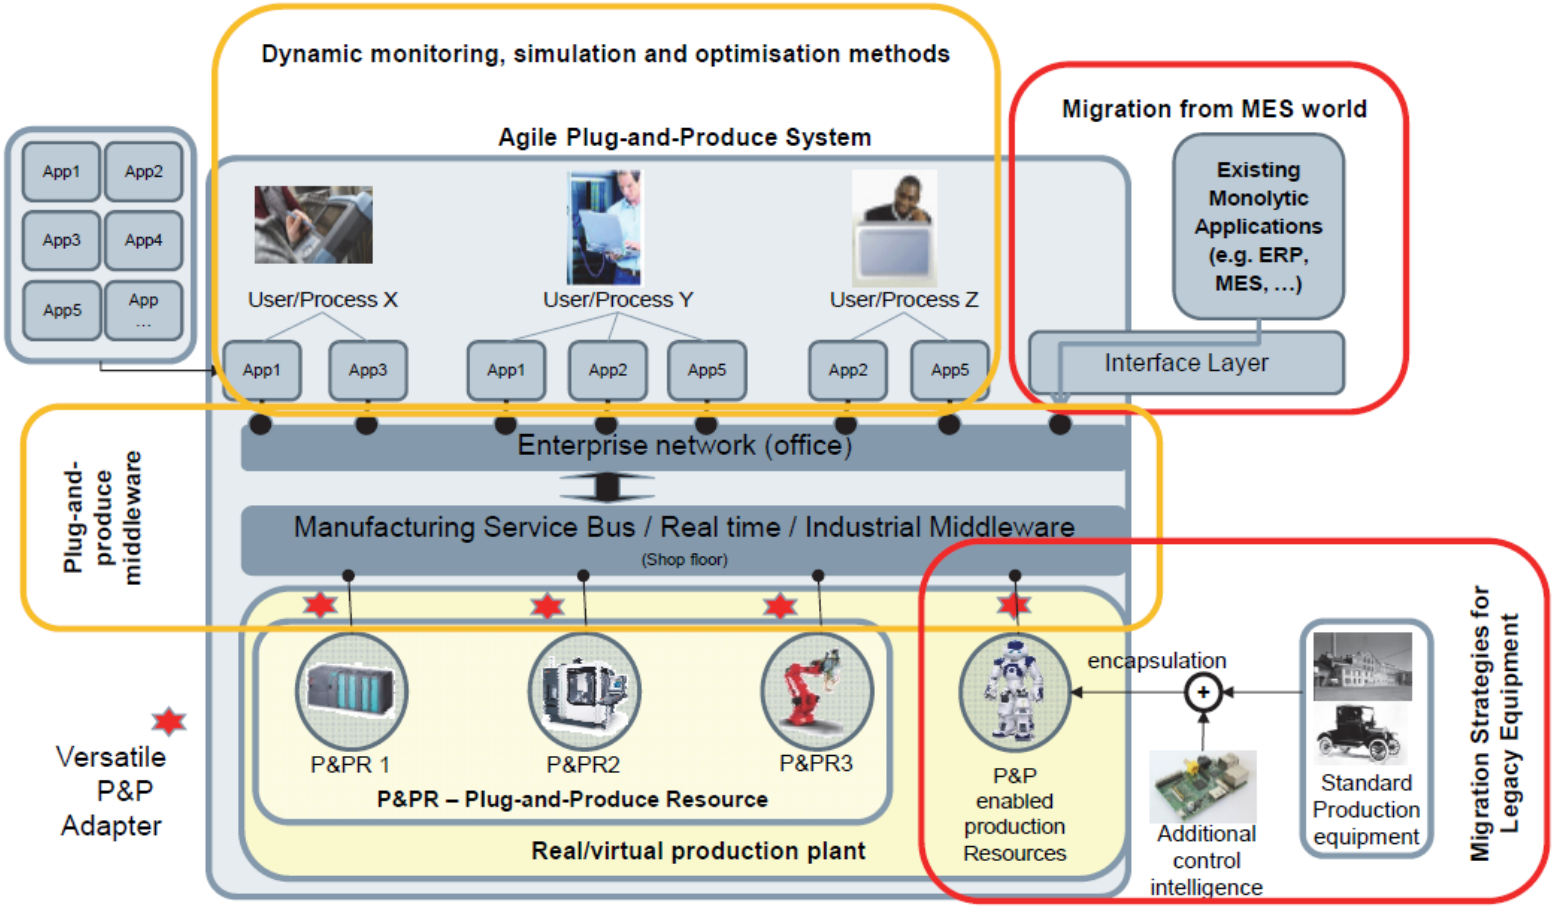
Current Situation



Old business paradigm

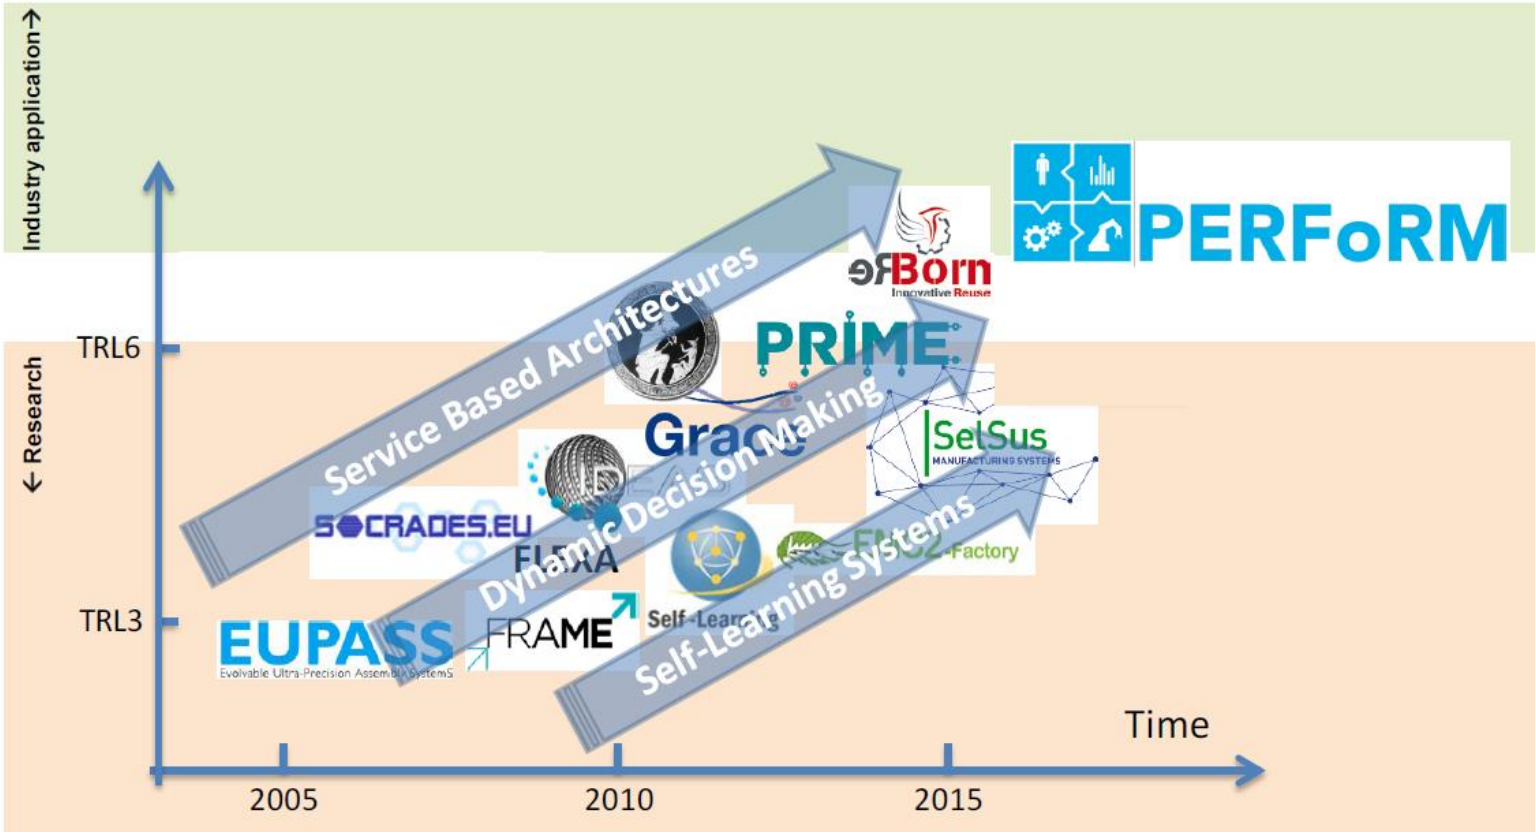
New buisiness paradigm

Approach – PERFoRM concept



PERFoRM concept

Approach – Relation to previous projects



PERFoRM in relation to previous research projects
